

Pain Relief & Management

Back pain is one of the most common patient complaints in health care. It is also one of the most common reasons people in our society visit with their primary care physicians. This often leads to numerous visits to spine surgeons and 'pain management' doctors for evaluation. Our Interventional Radiologists are board certified and specialty trained in the use of the most highly technological, non-invasive imaging equipment to treat back pain with minimally invasive techniques.

Our doctors perform image guided epidural, facet joint, and nerve root steroid injections for back pain treatment and image guided epidural steroid injections for neck pain. Our doctors also treat pain associated with cancer of the spine using a combination of radiofrequency tumor ablation and bone cement augmentation, and treat compression fractures of the spine with kyphoplasty and vertebroplasty procedures.
